

Position Vectors in 3-d: Student Difficulty With Spherical Unit Vectors in Intermediate E&M

Brant Hinrichs

Drury University, 900 N. Benton Ave., Springfield, MO

Introduction

- Student difficulties in introductory mechanics have been studied extensively (e.g. see any paper by McDermott, Schaffer, et. al. of the last 15 years) [1]
- Even student difficulties in introductory E&M have begun to be studied more extensively
- But there are few studies of student difficulties in intermediate E&M
- This poster presents results from a study of student difficulties with position vectors and spherical unit vectors in Griffith's level E&M [2]]

Motivation

- My students
 - were very competent with spherical *coordinates* (r, θ, ϕ)
 - but still didn't seem to "get" spherical *unit vectors* $\hat{r}, \hat{\theta}, \hat{\phi}$
- Goals of intermediate E&M:
 - understand the math and physics of Maxwell's Integral equations (Electric & Magnetic)
 - functionally understand (i.e. be able to set up) 3-d vector integrations to calculate fields & potentials:

$$\vec{E}(\vec{r}) = \frac{1}{4\pi\epsilon_0} \iint_S \frac{\sigma(\vec{r}') d\vec{a}'}{|\vec{r} - \vec{r}'|^2} \cdot \frac{\vec{r} - \vec{r}'}{|\vec{r} - \vec{r}'|}$$

$$V(\vec{r}) = \frac{1}{4\pi\epsilon_0} \int_C \frac{\lambda(\vec{r}') dl'}{|\vec{r} - \vec{r}'|}$$

- #1) Integrate over *source* charge distribution (λ, σ, ρ)
- modeled as point:
 - particles (λ)
 - patches (σ)
 - chunks (ρ)
 - pointed to by \vec{r}'
- #2) Find field or potential at the *field point* pointed to by \vec{r}

- Position vectors \vec{r} and \vec{r}' are **ubiquitous** in Maxwell's Integral equations
 - students should be able to write down \vec{r} and \vec{r}' for any given non-Cartesian geometry
 - start with spherically symmetric geometries

Example

A hollow cone of radius a , and height h , is centered on the z -axis with its tip at the origin and its base in the $+z$ direction. It has uniform surface charge density, σ , on its curved sides, but no charge on its base. Find the electric potential at a point on the z -axis above the cone.

$da' = \text{generic patch of source charge}$

$\vec{r} = \text{field point} = z\hat{z}$ $\vec{r}' = \text{points to patch} = r'\hat{r}'$

$$\hat{r}' = \sin\theta' \cos\phi' \hat{x} + \sin\theta' \sin\phi' \hat{y} + \cos\theta' \hat{z}$$

$$\begin{cases} 0 < r' < \sqrt{a^2 + h^2} \\ 0 < \phi' < 2\pi \\ \theta' = \tan^{-1}(a/h) \end{cases}$$

TABLE 1. Schools from which data was collected and details of how the concept test was given at each school.

Institution	Textbook	N ^a	How Given	When Given
Small private liberal arts college in the upper midwest, PLA	Pollack & Stump [3]	12 of 12	As homework for credit	After completing both Chp2 (Vector Calculus) in class and relevant homework from Chp2
Small public university in the upper midwest, SP	Griffiths	6 of 6	Quiz	After completing both lecture on Section 1.4 (curvilinear coordinates) and relevant homework
Large public university in the southwest, undergraduates, LP-ug	Griffiths	14 of 26	Volunteers who stayed after class	During the last week of a full year of intermediate E&M
Large public university in the southwest, graduate students, LP-g	n/a	14 of 21	Volunteers who stayed after class	During the last week of the first year of graduate school, in their quantum course

^a Indicates how many of the students officially registered for the course actually took the concept test.

TABLE 2. Results for each school and composite totals for the concept test shown previously

School	N	Correct	Answer ^b						r, θ, φ all correct ^c	
			A1	A2	A3	B1	B2	C		Other
PLA	12	0	6	2	1	2	1	0	0	6
SP	6	0	3	0	1	1	0	1	0	3
LP-ug	14	1	6	3	0	1	2	0	1	6
LP-g	14	0	6	1	1	4	0	2	0	7
	46	1	21	6	3	8	3	3	1	22
	100%	2%	46%	13%	7%	17%	7%	7%	2%	48%

^b Number of students at each school who made this kind of error.

^c Number of students at each school who got all r, θ, ϕ values correct for all six points.

Observations

- Only one person got the correct answer!
- Graduate students did no better than undergraduates
- The results don't seem to depend on text, teacher, year in school, type of school, class size, etc.
- Nearly half of all students put answer A₁
- About twenty percent just listed r, θ, ϕ
- Seventy percent (A+correct+other) explicitly included unit vectors in their answers
- Half of all student had difficulty determining correct *values* for the spherical coordinates themselves
- Students don't understand what it means to express a vector as a linear superposition of unit vectors (A₂, A₃)
- Students misapply methods from Cartesian coordinates (A₁), (i.e. pattern matching)

$$\vec{r} = (x, y, z) = x\hat{x} + y\hat{y} + z\hat{z}$$

$$\vec{r} = (r, \theta, \phi) \neq r\hat{r} + \theta\hat{\theta} + \phi\hat{\phi}$$

Typical Incorrect Answers

Explicitly include $\hat{r}, \hat{\theta}, \hat{\phi}$

Type A₁

- $\vec{r} = 5\hat{r} + \frac{\pi}{2}\hat{\theta} + 0\hat{\phi}$
- $\vec{r} = 5\hat{r} + \frac{\pi}{2}\hat{\theta} + \frac{\pi}{2}\hat{\phi}$
- $\vec{r} = 5\hat{r} + \frac{\pi}{2}\hat{\theta} + \frac{\pi}{2}\hat{\phi}$
- $\vec{r} = 5\hat{r} + \frac{\pi}{2}\hat{\theta} + \frac{\pi}{2}\hat{\phi}$
- $\vec{r} = 5\hat{r} + 0\hat{\theta} + 0\hat{\phi}$
- $\vec{r} = 5\hat{r} + \frac{\pi}{2}\hat{\theta} + \frac{\pi}{2}\hat{\phi}$

Type A₂

- $5\hat{r}, 0\hat{\theta}, \frac{\pi}{2}\hat{\phi}$
- $5\hat{r}, 0\hat{\theta}, \pi\hat{\theta}$
- $5\hat{r}, \frac{\pi}{2}\hat{\theta}, \frac{\pi}{2}\hat{\phi}$
- $5\hat{r}, \pi\hat{\theta}, \frac{\pi}{2}\hat{\phi}$
- $5\hat{r}, 0\hat{\theta}, 0\hat{\phi}$
- $5\hat{r}, \frac{3\pi}{2}\hat{\theta}, \frac{\pi}{2}\hat{\phi}$

Type A₃

\vec{r} in terms of $\hat{r}, \hat{\theta}, \hat{\phi}$

$$\hat{r} = \sin\theta \cos\phi \hat{x} + \sin\theta \sin\phi \hat{y} + \cos\theta \hat{z}$$

$$\hat{\theta} = \cos\theta \cos\phi \hat{x} + \cos\theta \sin\phi \hat{y} - \sin\theta \hat{z}$$

$$\hat{\phi} = -\sin\phi \hat{x} + \cos\phi \hat{y}$$

- $\vec{r} = \langle 5, \frac{\pi}{2}, 0 \rangle$
- $\vec{r} = \langle 5, \pi, 0 \rangle$
- $\vec{r} = \langle 5, \frac{\pi}{2}, \frac{\pi}{2} \rangle$
- $\vec{r} = \langle 5, \frac{\pi}{2}, \pi \rangle$
- $\vec{r} = \langle 5, 0, 0 \rangle$
- $\vec{r} = \langle 5, \frac{\pi}{2}, \frac{\pi}{2} \rangle$

Do not include $\hat{r}, \hat{\theta}, \hat{\phi}$

Type B₁

- $(5, \frac{\pi}{2}, 0)$
- $(5, \pi, 0)$
- $(5, \frac{\pi}{2}, \frac{\pi}{2})$
- $(5, \frac{\pi}{2}, \pi)$
- $(5, 0, 0)$
- $(5, \frac{\pi}{2}, \frac{3\pi}{2})$

Type B₂

- $r = 5, \theta = 0, \phi = 0$
- $r = 5, \theta = \pi, \phi = 0$
- $r = 5, \theta = \pi/2, \phi = 0$
- $r = 5, \theta = \pi/2, \phi = \pi/4$

Type C

$$x = r \sin\theta \cos\phi$$

$$y = r \sin\theta \sin\phi$$

$$z = r \cos\theta$$

or CARTESIAN

$$\vec{r} = 5 \sin\theta \cos\phi \hat{x} + 5 \sin\theta \sin\phi \hat{y} + 5 \cos\theta \hat{z}$$

- is $(5, 0, 0)$ $\vec{r} = 5 \cos\theta \hat{z}$
- is $(0, 0, -5)$ $\vec{r} = -5 \cos\theta \hat{z}$
- is $(0, 5, 0)$ $\vec{r} = 5 \sin\theta \sin\phi \hat{y}$
- is $(-5, 0, 0)$ $\vec{r} = -5 \sin\theta \cos\phi \hat{x}$
- is $(0, 0, 5)$ $\vec{r} = 5 \cos\theta \hat{z}$
- is $(0, -5, 0)$ $\vec{r} = -5 \sin\theta \sin\phi \hat{y}$

Concept Test

Please write \vec{r} in terms of $\hat{r}, \hat{\theta},$ and $\hat{\phi}$ for the following six different points. Show all work.

Expected Answer: $\vec{r}_1 = 5\hat{r}$ $\vec{r}_2 = 5\hat{r}$ $\vec{r}_3 = 5\hat{r}$
 $\vec{r}_4 = 5\hat{r}$ $\vec{r}_5 = 5\hat{r}$ $\vec{r}_6 = 5\hat{r}$

Explanation

$$\vec{r} = r\hat{r}$$

$$r = \sqrt{x^2 + y^2 + z^2}$$

$$\hat{r} = \sin\theta \cos\phi \hat{x} + \sin\theta \sin\phi \hat{y} + \cos\theta \hat{z}$$

\hat{r} always points radially outward from the origin
 - changes direction depending on θ and ϕ
 - doesn't point in a constant direction like $\hat{x}, \hat{y}, \hat{z}$

For example, for point 1, $\theta = \pi/2$ and $\phi = 0$, so
 $\hat{r} = \sin\frac{\pi}{2} \cos 0 \hat{x} + \sin\frac{\pi}{2} \sin 0 \hat{y} + \cos\frac{\pi}{2} \hat{z} = \hat{x}$

While for point 2, $\theta = \pi$ (ϕ doesn't matter), so
 $\hat{r} = \sin\pi \cos\phi \hat{x} + \sin\pi \sin\phi \hat{y} + \cos\pi \hat{z} = -\hat{z}$
