

# Abstract

---

Interactive video-enhanced tutorials (IVETs) involve web-based activities which lead students through a solution using expert-like problem-solving approaches, such as those needed for solving problems using Newton's Second Law. The IVETs, which are based in part on the tutorials created at the University of Pittsburgh, are designed using multimedia principles of learning and research on human learning and memory. The tutorials are adaptive and provide different levels of scaffolding depending on students' needs. They are also affect-adaptive, such that additional guidance is provided to students who indicate they are confused, frustrated, or bored while completing the IVET. This presentation will showcase one of the IVETs and its various design features.

# Interactive Video-Enhanced Tutorials: Design to support effective problem-solving strategies

ALEXANDRU MARIES, KATHLEEN KOENIG, & JOE ROSS, UNIVERSITY OF CINCINNATI

ROBERT TEESE & MICHELLE CHABOT, ROCHESTER INSTITUTE OF TECHNOLOGY

# Problem Solving Tutorials – Univ of Pittsburgh

---

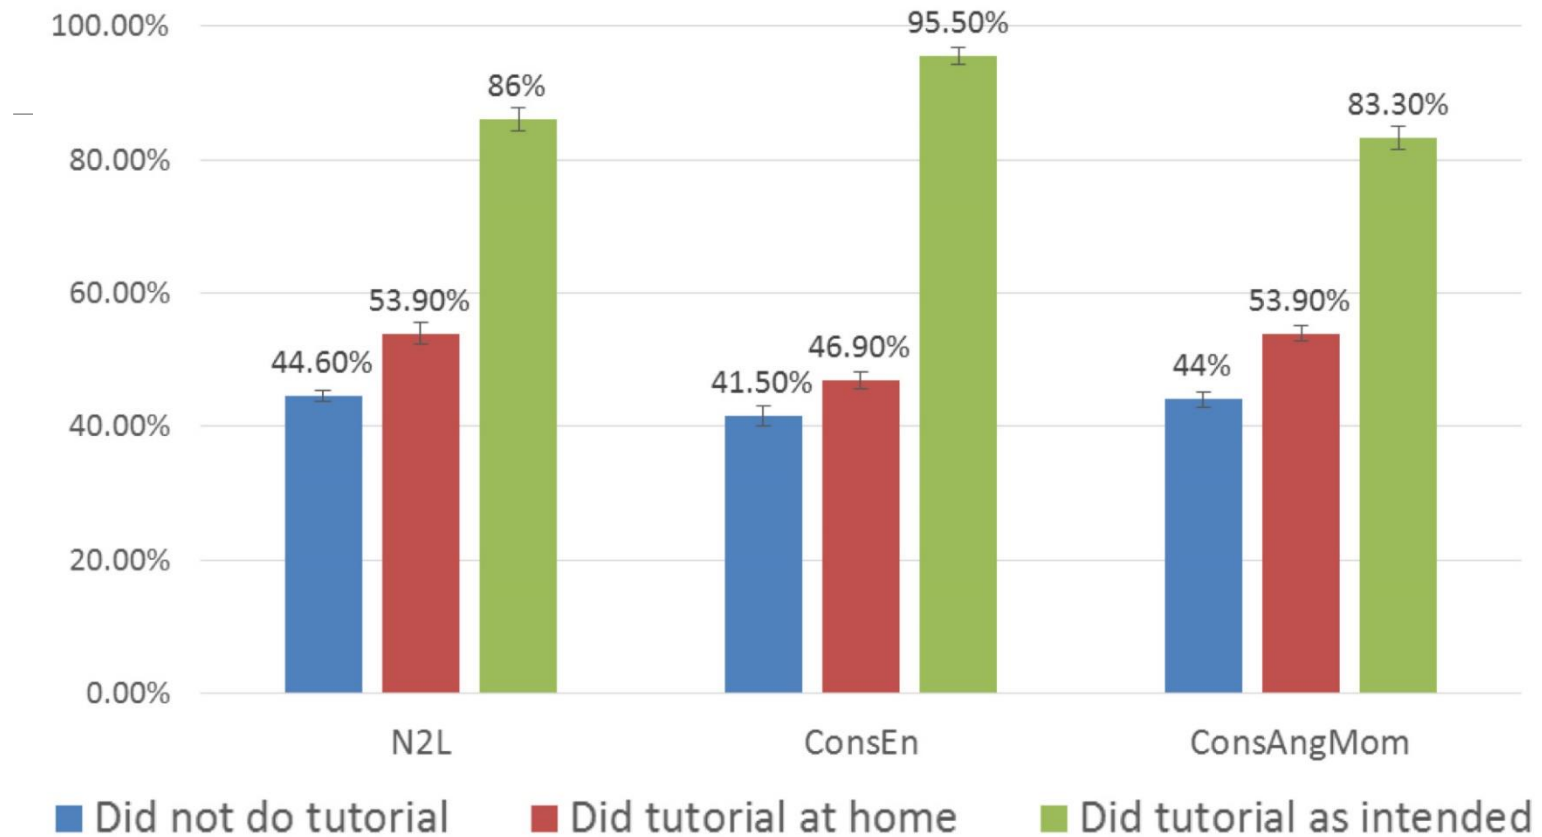

DeVore and Singh developed ~20 tutorials for introductory physics.

A large wooden wheel of radius  $R$  and moment of inertia  $I_w$  about its axis of symmetry is mounted on an axle so as to rotate freely. A bullet of mass  $m_b$  and speed  $v_b$  is shot and moves in a straight line (neglect gravity) tangential to the wheel and strikes its edge, lodging in it at the rim. If the wheel was originally at rest, what would its angular speed be after the collision between the bullet and the wheel?

Implemented through Powerpoint and designed to carefully guide students to a solution through the use of branching questions.

# Effectiveness of Tutorials

S. DeVore, E. Marshman, and C. Singh, "Challenge of engaging all students via self-paced interactive electronic learning tutorials for introductory physics," *Phys. Rev. ST Phys. Educ. Res.* **13** 010127, 1-18 (2017).

# Interactive Video Vignettes (IVVs)

NEWTON'S THIRD LAW

INTERACTIVE VIDEO VIGNETTE

*Question 1: Which car exerts a larger force on the other car during the collision?*

- The heavier, faster car exerts a larger force on the small car.
- The forces exerted by both cars are equal.
- The lighter, slower car exerts a larger force on the large car.

Designed to teach **concepts** for which students are known to struggle.

[www.compadre.org/ivv](http://www.compadre.org/ivv)  
or WebAssign

# Project Goals

---

- Create and evaluate a set of 30 IVETs
- Conduct research on
  - impact of IVETs on student problem solving abilities
  - techniques that motivate appropriate student behavior when using IVETs
- Disseminate through ComPADRE, etc

# Features of Design of IVETs

---

- Developed based on multimedia learning principles (Mayer) and research on human learning and memory (Bransford)
- Problems challenge students while providing support designed to stretch students' zone of proximal development
- Student support delivered through mini-lectures, hints, or encouragement (affect) by a tutor (a real person in a video)

# Features of Design of IVETs

---

- Multiple-choice questions guide students through an **expert-like problem-solving approach** (e.g., decide on what laws/principles are applicable, define a coordinate system, draw a force diagram, etc.)
- Questions branch based on student responses, providing relevant feedback for incorrect (and correct) answers
- Self-paced such that students who need less support can navigate through it quickly and vice versa
- 5-15 minutes to complete

# Example IVET – Linear Momentum and Energy

Linear Momentum Interactive Tutorial 1

Interactive Video-Enhanced Tutorials

# Text option: Page presents problem to be solved.

Two small spheres of putty, A and B, of equal mass  $m$ , hang from the ceiling on massless strings of equal length. Sphere A is raised to a height  $h_0$  as shown below and released. It collides with sphere B (which is initially at rest). The two spheres stick and swing together to a maximum height  $h_f$  (Assume a completely inelastic collision with the two spheres sticking together after the collision.)

# Tutorial often starts by asking which physics principles are applicable

Before starting any physics problem, you should identify the physics principles needed. If you want to see a video of the instructor, click the button at the bottom of the page.

Whenever you're solving a physics problem,

Q1: Choose *all* of the following physics principles that apply to this problem:

- A. Conservation of Total Mechanical Energy
- B. Conservation of Momentum
- C. Newton's 2nd Law

Q1: Choose *all* of the following physics principles we should use to solve this problem:

- A. Conservation of Total Mechanical Energy
- B. Conservation of Momentum
- C. Newton's 2nd Law

# Multiple select questions used to engage students and reduce guessing.

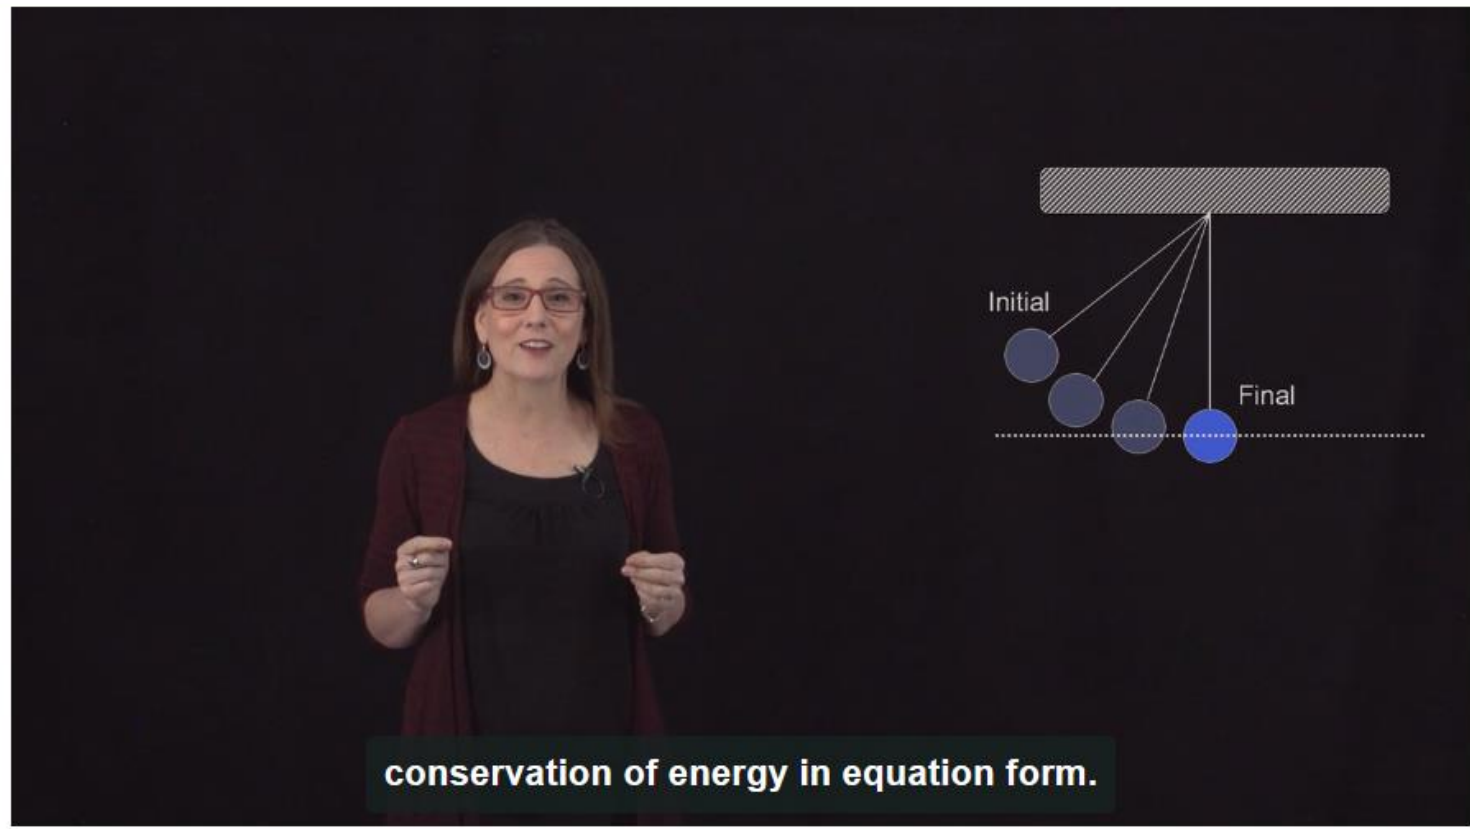

Q2: What type(s) of initial mechanical energy does ball A have when it is released? What type(s) of final mechanical energy does ball A have just before it strikes ball B? Choose *all that are not zero*:

- A. Initial Kinetic Energy
- B. Initial Gravitational Potential Energy
- C. Final Kinetic Energy
- D. Final Gravitational Potential Energy

Feedback is aligned  
to choices made.

Students are expected to work problem out on paper along with IVET.

conservation of energy in equation form.

Q3: Which one of the following expressions for the speed  $v_A$  of ball A right before it collides with ball B is correct?

- A.  $v_A = \sqrt{2gh_0}$
  - B.  $v_A = \sqrt{gh_0}$
  - C.  $v_A = \sqrt{\frac{gh_0}{2}}$
- Incorrect answer selected.

Feedback is provided to get student started in addressing this part of problem.

Incorrect. Click *Next Page* to go back and try again.

$$mgh_0 = \frac{1}{2}mv_A^2$$

Go ahead and use that equation, rearrange it,

← Back to Previous Page

Options ▾

Show Problem Statement

Students get brief summary even when correct.

**Correct.** Click the *Next Page* button to continue.

**CORRECT.** Click the Next Page button to continue.

Reasoning:

$$\text{Initial gravitational potential energy} = \text{Final kinetic energy}$$

$$\cancel{m}_A g h_0 = \frac{1}{2} \cancel{m}_A v_A^2$$

$$g h_0 = \frac{1}{2} v_A^2$$

$$2g h_0 = v_A^2$$

$$v_A = \sqrt{2g h_0}$$

Throughout the IVET, emphasis is placed on solving the problem in parts to reduce cognitive load. Here, tutorial moves on to the 2<sup>nd</sup> part of the problem

We just used conservation before it hits ball B. Now concept(s) do we need?

**So remember that we're taking this problem in parts.**

Q4: Which of the following principles is most convenient to find an expression for the speed of the merged balls ( $v_{AB}$ ), in terms of the speed that ball A had immediately before the collision ( $v_A$ )?

- A. Conservation of Linear Momentum
- B. Newton's Second Law
- C. Conservation of Total Mechanical Energy

Q4: Which of the following principles is most convenient to find an expression for the speed of the merged balls ( $v_{AB}$ ), in terms of the speed that ball A had immediately before the collision ( $v_A$ )?

- A. Conservation of Linear Momentum
- B. Newton's Second Law
- C. Conservation of Total Mechanical Energy

[← Back to Previous Page](#)

Students are led to an equation which wraps up the collision part of the problem.

**Correct.** Click the *Next Page* button to continue.

$$\sum \vec{p}_i = \sum \vec{p}_f$$

$$M_A V_A = (M_A + M_B) \underline{V_{AB}}$$

$$M V_A = 2M V_{AB}$$

$$V_{AB} = \frac{V_A}{2}$$

Apply

Q5. Which one of the system of two

$$V_{AB} =$$

Ⓐ.

# Tutorial responds to student affective states to help with motivation to engage

## How are you feeling right now?

What is this? Why should I answer?

I feel fine.

I feel fine.

I feel confused.

I feel confused.

I feel frustrated.

Please choose the most appropriate response from this list.

I feel bored.

- The tutorial is moving too quickly.
- I am having trouble staying focused so I'm not getting the most out of this tutorial.
- This tutorial uses terms that I do not understand.
- The problem-solving approach used here is different from what I learned in class.

I feel worried.

None of the choices

I feel frustrated.

I prefer not to answer.

[← Back to Previous Page](#)

Options ▾  
[Show Problem Statement](#)

[Continue to Next Page →](#)

# Affective responses

---

- Main goal is to help motivate student to engage properly with tutorial
- Important emotions to respond to obtained from literature on computer tutors and consultation with an expert in computational models of emotion
- Emotions are always validated first, then:
  - Confused: provided advice and more support
  - Frustrated/worried: emotional support and advice where appropriate
  - Bored: reminded that tutorial provides a problem solving strategy applicable to many problems

# Affective response: Example

---

- Confused because tutorial is moving too quickly:
  - Yes, this problem certainly can be confusing and it has many different parts (validation)
  - Here are some things you can do to slow the problem down and regain focus:
    - Reread the problem statement. That will help you remember the end goal of the problem as well as keep the big picture in mind
    - You can also make sure that you are taking clear notes every step of the way; look over them
    - Sometimes, it's also helpful to just take a short break
    - On the next page, we're going to give you the option to watch a summary of what we've done so far. This will help recap the big picture of what we are doing and you should definitely choose that option.

# Affective response: Example

---

- Confused because tutorial is moving too quickly:
  - Yes, this problem certainly can be confusing and it has many different parts (validation)

Similar approach for other affective states.

Content of the feedback (exact words) as well as the demeanor (tone, posture, facial expressions) developed in consultation with the expert in computational models of emotion.

- Sometimes, it's also helpful to just take a short break
- On the next page, we're going to give you the option to watch a summary of what we've done so far. This will help recap the big picture of what we are doing and you should definitely choose that option.

Do y  
rather

- A.  
 B.

BEFORE:

$$\sum E_i = \sum E_f$$

$$M_A g h_0 = \frac{1}{2} M_A V_A^2$$

$$\underline{V_A = \sqrt{2gh_0}}$$

COLLISION

$$\sum \vec{p}_i = \sum \vec{p}_f$$

$$M_A V_A = (M_A + M_B) V_{AB}$$

$$\underline{V_{AB} = \frac{V_A}{2}}$$

Again, emphasis on solving problem in parts -> next part moves to the third step.

as we move on to the third step.

Students provided option to watch a summary after finishing the problem

Do you want to see a video summary of what we have done, or would you rather continue with the tutorial?

- Watch a video summary.
- Continue with the tutorial.

← Back to Previous Page

Options ^  
Show Problem Statement

Continue to Next Page →

Video summary is ~5 minutes long.

BEFORE:

$$\Sigma E_i = \Sigma E_f$$

$$M_A g h_0 = \frac{1}{2} M_A V_A^2$$

$$\underline{V_A = \sqrt{2gh_0}}$$

COLLISION

$$\Sigma \vec{p}_i = \Sigma \vec{p}_f$$

$$M_A V_A = (M_A + M_B) V_{AB}$$

$$\underline{V_{AB} = \frac{V_A}{2}}$$

AFTER

$$\Sigma E_i = \Sigma E_f$$

$$\frac{1}{2} (2m) V_{AB}^2 = (2m) g h_f$$

$$\underline{h_f = \frac{V_{AB}^2}{2g}}$$

This same video summary is shown to a control group when we evaluated impact of IVET (Kathy Koenig's talk)

**We're pretty much done, all that's left is some algebra.**

Does IVET impact student problem solving ability?

Talk by Kathy Koenig: “Interactive Video-Enhanced Tutorials: Impact on Student Problem-Solving Abilities”

## Thank you!

If you are interested in seeing or using the IVETs we have,  
please email me!

[alexandru.maries@uc.edu](mailto:alexandru.maries@uc.edu)

### IVETs we have developed so far:

- Newton's 2<sup>nd</sup> Law (force on two blocks)
- Conservation of Energy (will string break on tire swing?)
- Linear Momentum and Energy (pendulum balls collide)
- Static Equilibrium (person on ladder leaning against wall)
- Torque and rotation (two masses hanging from pulley with two radii)
- Angular Momentum (bullet shot into wheel)
